Story

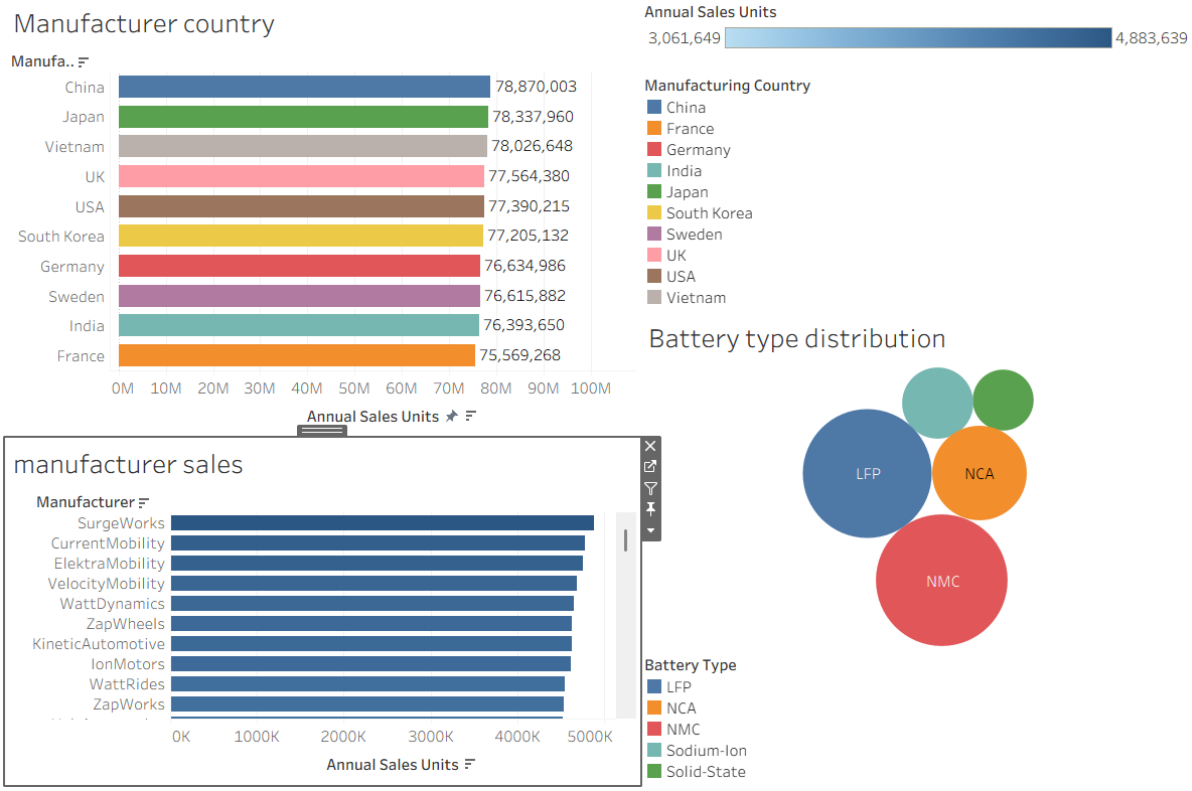

Date: 28 Oct 2026
Team ID: EN25CS3010990
Project Name: EV Market Performance and Insights
Maximum Marks: 5 Marks

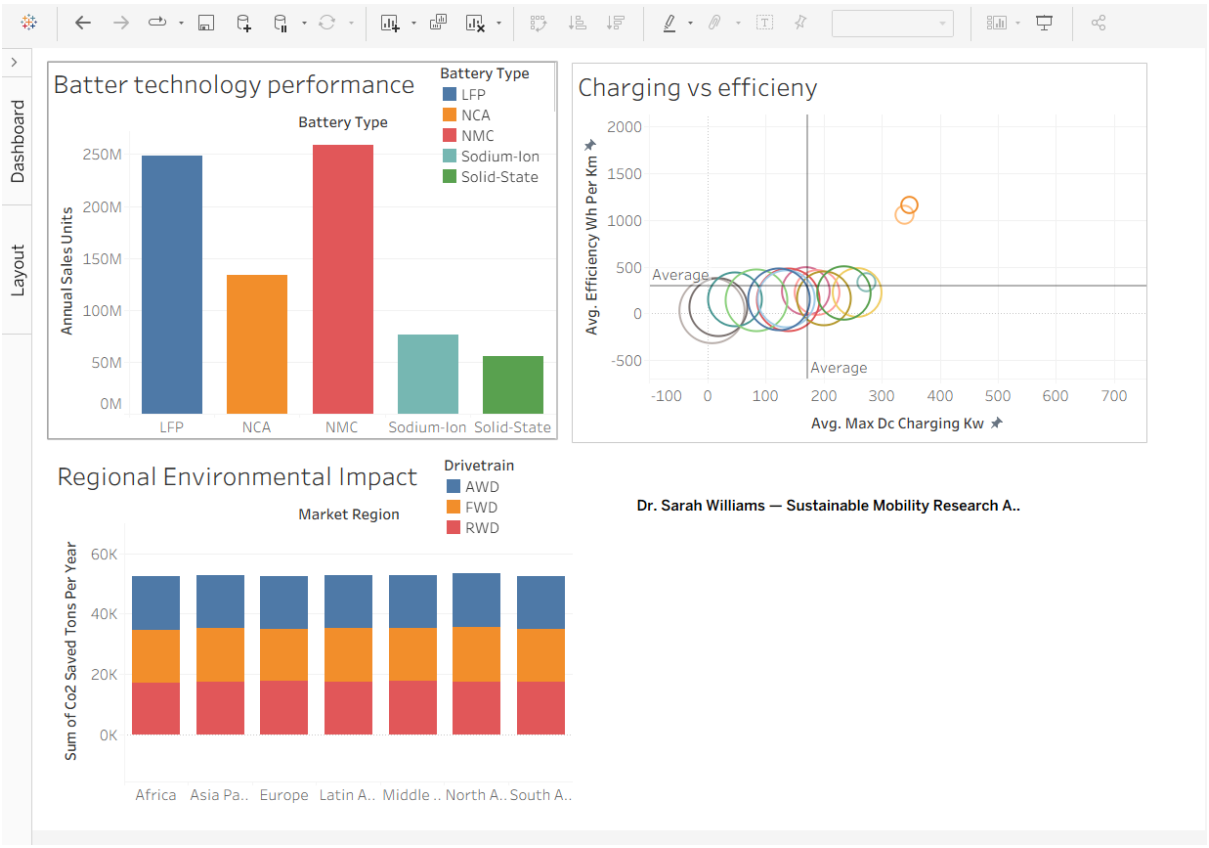

Introduction

By using stories in Tableau, complex data can be communicated in an interactive and engaging way. Tableau Stories combine dashboards, visualizations, and text to present data insights in a logical sequence, helping viewers understand important trends and outcomes.

In this project, Tableau is used to analyze Electric Vehicle (EV) market performance based on manufacturer sales, vehicle categories, driving range, manufacturing countries, battery technology, charging efficiency, and environmental impact. The dashboards help identify market trends and support data-driven decision-making.

Observations

- **Story Point 1 – Manufacturer Performance:** SurgeWorks, CurrentMobility, and ElectraMobility are among the leading manufacturers in annual EV sales units, highlighting their strong performance in the displayed comparison.
- **Story Point 2 – Vehicle Category Analysis:** Two-Wheeler Scooters, Sedans, and Hatchbacks show relatively high sales, while Electric Buses and Pickup Trucks have comparatively lower sales.
- **Story Point 3 – Sales Trend:** The sales trend from 2018 to 2026 shows variations across vehicle categories, helping identify changes in EV market demand over time.
- **Story Point 4 – Driving Range:** Average driving range differs across vehicle categories. Several SUV and luxury vehicle categories show higher range values than smaller vehicle categories.
- **Story Point 5 – Manufacturing Countries:** China, Japan, and Vietnam are among the leading countries in the displayed annual sales comparison, followed by the UK, USA, South Korea, Germany, Sweden, India, and France.
- **Story Point 6 – Battery Technology:** NMC and LFP batteries have the highest sales volumes in the displayed battery technology chart, while Sodium-Ion and Solid-State batteries show comparatively lower sales.
- **Story Point 7 – Charging and Efficiency:** The charging-versus-efficiency visualization compares maximum DC charging power with energy efficiency, revealing differences among the displayed vehicle groups.
- **Story Point 8 – Environmental Impact:** The regional environmental impact visualization compares estimated annual CO savings across market regions and drivetrain types, highlighting the potential environmental benefits of electric vehicles.

Major Outcome

The Tableau dashboards provide a consolidated view of EV market performance by comparing manufacturers, vehicle categories, sales trends, driving ranges, manufacturing countries, battery technologies, charging efficiency, and environmental impact. These insights can help stakeholders understand market patterns and make informed business decisions.
